

The Brunner Investment Trust PLC

An 'all-weather' global equity portfolio

Allianz 
Global Investors

Aim

The Trust aims to provide growth in capital value and dividends over the long term by investing in global and UK securities. The benchmark against which performance is measured is 70% FTSE World ex-UK Index and 30% FTSE All-Share Index.

History

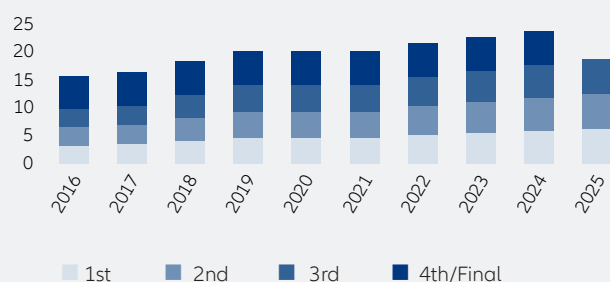

The Brunner Investment Trust PLC was formed from the Brunner family's interest in the sale of Brunner Mond & Co, the largest of the four companies which came to form Imperial Chemical Industries (ICI) in 1926. Today, Brunner shares are available for everyone to buy and are widely held by both private and institutional investors.

Trust Benefits

Brunner aims to provide its shareholders with growing dividends and capital growth by investing in a portfolio of global equities. It is an independent company listed on the London Stock Exchange and, although past performance is no guide to the future, has paid increasingly higher dividends to its shareholders year on year for the last 53 years. The Trust invests in companies all over the world, seeking out opportunities for growth and reliable dividends wherever they may be.

1. The Ongoing Charge does not represent an additional cost that shareholders of the Company must pay. The Company's share price already reflects the market's assessment of its value taking into consideration publicly disclosed information, including operating expenses and other costs which are disclosed in the Accounts. The investment platform or stockbroker used, or the company/person selling you or advising you about this product may charge you other costs. If so, they will provide you with the relevant information about these costs. Source: AIC, as at the Trust's Financial Year End (30.11.2024). Ongoing Charges (previously Total Expense Ratios) are published annually to show operational expenses, which include the annual management fee, incurred in the running of the company but excluding financing costs.

Fund Manager's Review

Global stock markets rose slightly during December, capping a third consecutive year of double-digit returns. As in the rest of the year, the US was a relative laggard, with UK and European markets outperforming. UK and European markets rose around 2% in Sterling terms, while the US market was down a little over 1% in December. For calendar 2025 as a whole, UK and European markets delivered impressive total returns of around 24% and 27% in Sterling respectively whilst the US S&P 500 Index was only up around 10% in Sterling once dollar weakness was considered. The strong absolute performance of global stock markets in 2025 is remarkable given the significant sell-offs in April triggered by President Trump's announcement of 'liberation day' tariffs.

Although major stock markets are trading close to record highs, most large central banks appear concerned with weakening macroeconomic data. In the US, the Federal Reserve cut interest rates for a third consecutive time, to 3.5-3.75%. Despite an ongoing data vacuum following the 43-day US government shutdown in October and November, evidence of muted job growth and a surprise drop in a key inflation metric provided scope for short-term interest rates to be cut to their lowest level since 2022. The Bank of England also narrowly voted in favour of cutting interest rates for the 6th time, to 3.75%, citing falling inflation (down to 3.2% in November, though still significantly above the 2% target), subdued economic growth (which was modestly negative in October) and increasing slack in the labour market. The European Central Bank left interest rates unchanged at 2.0%, having cut rates aggressively since the middle of 2024. Despite the declines in benchmark (short-term) interest rates, long-term interest rates – which theoretically matter more for the valuation of long-duration assets like equities – remain stubbornly high.

“ We are conscious that the combination of low short-term interest rates with large and persistent government deficits, during what is a relatively benign economic environment, provides policymakers with relatively little ammunition in the event of a worsening macroeconomic environment ”

**Julian Bishop,
Co-Lead Portfolio Manager**

Julian Bishop joined Allianz Global Investors in November 2022. Julian has more than 25 years fund management experience. He joined AllianzGI from Tesco Pension Investment Ltd where he was an Equity Fund Manager managing a multi-billion pounds global equities portfolio. Julian graduated from Queens' College, Cambridge University in 1995 and has an MA (Hons) Cantab in Geography. He is an Associate of the CFA Society of the UK.

**James Ashworth,
Co-Lead Portfolio Manager**

James has more than 20 years' experience in financial services and joined AllianzGI from Tesco Pension Fund where he managed a global equities portfolio. Prior to Tesco, James was a global equities analyst at Universities Superannuation Scheme where he worked on the North American public equities portfolio. He has held investment analyst roles at private investment firms. James started his career at Deutsche Bank where he was in the investment banking division. James has an MA (Hons) in Economics from Cambridge University. He is a CFA charterholder.

The interest rate on US 30-year government debt is at levels not seen since 2007, while the yield on 30-year UK government gilts is at levels not seen since 1998. We are conscious that the combination of low short-term interest rates with large and persistent government deficits, during what is a relatively benign economic environment, provides policymakers with relatively little ammunition in the event of a worsening macroeconomic environment.

Brunner's Net Asset Value (NAV) total return for December was 0.46%, modestly ahead of the benchmark return of 0.40%. The largest positive contributors to performance were varied, across a range of sectors and geographies.

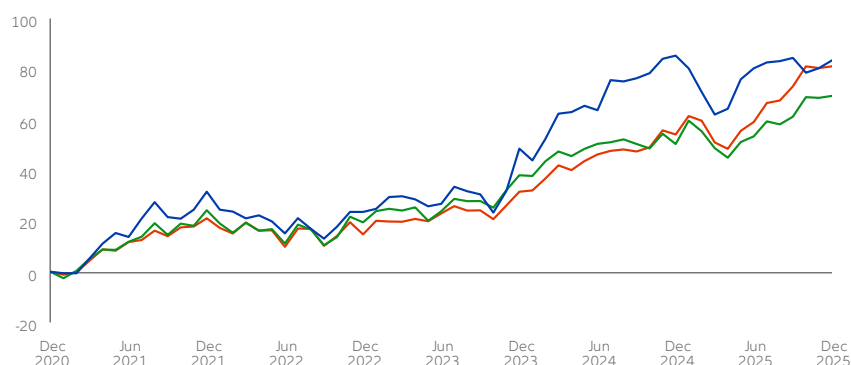

There were no trades this month. However, the Trust now holds a small position in the Magnum Ice Cream Company, which was demerged from Unilever during the month.

**Julian Bishop & James Ashworth
13 January 2026**

This is no recommendation or solicitation to buy or sell any particular security. Any security mentioned above will not necessarily be comprised in the portfolio by the time this document is disclosed or at any other subsequent date.

Risk & Features

Investment trusts are quoted companies listed on the London Stock Exchange. Their share prices are determined by factors including the balance of supply and demand in the market.

The Trust seeks to enhance returns for its shareholders through gearing which can boost the Trust's returns when investments perform well, though losses can be magnified when investments lose value. You should be aware that this Trust may be subject to sudden and large falls in value and you could suffer substantial capital loss.

Changes in rates of exchange may cause the value of investments and the income from them to go up or down.

Cumulative Returns (%)

	3M	6M	1Y	3Y	5Y
Share Price	-0.5	1.7	-1.0	48.4	83.5

Past performance does not predict future returns. Investing involves risk. The value of an investment and the income from it may fall as well as rise and investors might not get back the full amount invested. This investment trust charges 70% of its annual management fee to the capital account and 30% to revenue. This could lead to a higher level of income but capital growth will be constrained as a result.

Environmental, Social and Governance (ESG)

AllianzGI has a dedicated ESG research team working with the portfolio managers to incorporate ESG factors into investment decisions. The board supports AllianzGI's view that there is value in working with companies in the portfolio on environmental, social, governance and business conduct issues.

AllianzGI uses third party research provided by MSCI to help identify ESG factors that can impact the businesses of the companies in the portfolio. The chart shows that the Brunner portfolio's ESG ratings compare well against the benchmark's ESG ratings over a five year period.

The chart above shows the rating of the Brunner portfolio on ESG risks and combined ESG risk measurements compared to the rating of the Benchmark (70% FTSE World ex-UK Index; 30% FTSE All-Share Index) scored on a scale of 1-10 (where 10 is high) on a quarterly basis.

Glossary

Share Price is the price of a single ordinary share, as determined by the stock market. The share price above is the mid-market price at market close.

Net Asset Value (NAV) per Share is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities.

The NAV figure above is based on the fair/market value cum income of the company's long term debt and preference shares (known as debt at fair value). This allows for the valuation of long-term debt and preference shares at fair value or current market price, rather than at final repayment value (known as debt at par).

Premium/Discount. Since investment company shares are traded on a stock market, the share price that you get may be higher or lower than the NAV. The difference is known as a premium or discount.

Dividend Yield is calculated using the latest full year dividend divided by the current share price.

Gearing is a measure of a company's financial leverage and shows the extent to which its operations are funded by lenders versus shareholders.

How to invest

You can buy shares in the Trust through:

- A third party provider - see 'How to Invest' on our website, where you will find links to a range of these platforms, many of which allow you to hold the shares within an ISA, Junior ISA, SIPP and/or savings scheme.
- A stockbroker.
- A financial adviser.
