Investment trusts are quoted companies listed on the London Stock Exchange. Their share price is determined by factors including demand, or lack of, which means that the shares may trade below (at a discount to) or above (at a premium to) the underlying net asset value.

A trust's net asset value (NAV) is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities. In line with current industry best practice NAVs are shown that take into account the 'fair value' of debt. This means NAVs are calculated after allowing for the valuation of debt at fair value or current market price, rather than at final repayment value. NAVs with debt at market value provide a more realistic impact of the cost of debt, and thus a more realistic discount.

Trust aim & characteristics

The Trust's objective is to increase its total return above the benchmark index of 50% FTSE All-Share and 50% FT/S&P World Index (ex UK sterling adjusted) over the long term, by investing in UK and international securities. The strategy of the Trust is designed to meet the requirements of those seeking a single investment in a diversified and professionally managed portfolio.

††The Trust also seeks to enhance returns for its shareholders through gearing, in the form of bank borrowings. Gearing can boost the Trust's returns when investments perform well, though losses can be magnified when investments do badly. You should be aware that this Trust may be subject to sudden and large falls in value and you could suffer substantial capital loss.

Fund Managers' review

May saw World equity markets advance for the third successive month led by energy and materials companies. Inflation figures for the US, UK, and Eurozone showed a marked increase in May, reflecting the rising cost of energy and food, along with record oil prices, making further interest rate cuts highly unlikely in the short term. May also saw a number of rights issues by the struggling European banks, with mixed results. The portfolio outperformed its benchmark in May with Hansen Transmissions, who make gearboxes for wind turbines, the best performing security after announcing increased output and profits in its fourth quarter report. Canadian Natural Resources and Fluor also performed well. Citigroup and HBOS were the worst performers in the portfolio, along with China Mobile which is set to face increased competition after the Chinese government announced plans to merge smaller operators to increase competition.

Changes in rates of exchange may cause the value of investments and the income from them to go down or up.

Source: Allianz Global Investors/ Mellon. 30th May 2003 to 30th May 2008. Capital only, calculation indexed. UK Sterling.

Past performance is not a reliable indicator of future performance. You should not make any assumptions on the future on the basis of performance information. The value of an investment and the income from it can fall as well as rise as a result of market and currency fluctuations and you may not get back the amount originally invested. This investment trust charges 70% of its annual management fee to the capital account and 30% to revenue. This could lead to a higher level of income but capital growth will be constrained as a result. Your capital could also decrease if income paid out of capital exceeds the growth rate of the trust.

History

The Trust was formed from the Brunner family's interest in the sale of Brunner, Mond & Co, the largest of the four companies which came to form ICI in 1926. The Trust has been managed by Allianz Global Investors (formerly Kleinwort Benson and now part of Allianz) since inception.

Launch Date: 1927 **Wind-up Date:** None

Share buybacks
