Investment trusts are quoted companies listed on the London Stock Exchange. Their share price is determined by factors including demand, or lack of, which means that the shares may trade below (at a discount to) or above (at a premium to) the underlying net asset value.

A trust's net asset value (NAV) is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities. In line with current industry best practice NAVs are now shown that take into account the 'fair value' of debt. This means NAVs are calculated after allowing for the valuation of debt at fair value or current market price, rather than at final repayment value. NAVs with debt at market value provide a more realistic impact of the cost of debt, and thus a more realistic discount.

Please also refer to Trust Aim & Characteristics, above right.

Trust aim & characteristics

The Trust's objective is to increase its total return above the benchmark index of 60% FTSE All-Share and 40% FT/S&P World Index (ex UK sterling adjusted) over the long term, by investing in UK and international securities. The strategy of the Trust is designed to meet the requirements of those seeking a single investment in a diversified and professionally managed portfolio.

††The Trust also seeks to enhance returns for its shareholders through gearing, in the form of bank borrowings. Gearing can boost the Trust's returns when investments perform well, though losses can be magnified when investments do badly. You should be aware that this Trust may be subject to sudden and large falls in value and you could suffer substantial capital loss.

Fund Managers' Review

Global equities returned +1.3% in February with European utility stocks leading the way after a pick up in merger and acquisition activity. In economic terms Europe continues to show encouraging signs of improvement and the US remains broadly stable.

Oil and gas stocks were the biggest underperformers in February as oil prices dropped almost 10%; the Trust's holdings in this sector gave up some of their gains made last year but still remain in positive territory. Other commodity stocks such as mining also saw declining returns as profit takers took advantage of recent highs in share prices. Of the positive contributors the UK banking sector produced steady performance in February with holdings in Barclays, HBOS and Royal Bank of Scotland all returning around +10%.

Looking ahead, we remain comfortable with the underweighting to US equities where fewer attractive investing opportunities exist, and continue to believe the stronger returns seen in Europe will continue in 2006.

Source: Allianz Global Investors/ Russell/ Mellon. 28th February 2001 to 28th February 2006, Total Return, net income reinvested, calculation indexed. UK Sterling.

Please remember that past performance is not a guide to future performance. The value of an investment and the income from it can fall as well as rise as a result of market or currency fluctuations and you may not get back the amount originally invested. This investment trust charges 70% of its annual management fee to the capital account and 30% to revenue. This could lead to a higher level of income but a lower capital return.

History

The Trust was formed from the Brunner family's interest in the sale of Brunner, Mond & Co, the largest of the four companies which came to form ICI in 1926. The Trust has been managed by Allianz Global Investors (formerly Kleinwort Benson and now part of Allianz) since inception.

Launch Date: 1927 **Wind-up Date:** None

Share buybacks

14,461,662 shares have been repurchased for cancellation to date.
