Investment trusts are quoted companies listed on the London Stock Exchange. Their share price is determined by factors including demand, or lack of, which means that the shares may trade below (at a discount to) or above (at a premium to) the underlying net asset value.

A trust's net asset value (NAV) is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities. In line with current industry best practice NAVs are shown that take into account the 'fair value' of debt. This means NAVs are calculated after allowing for the valuation of debt at fair value or current market price, rather than at final repayment value. NAVs with debt at market value provide a more realistic impact of the cost of debt, and thus a more realistic discount.

Trust aim & characteristics

The Trust's objective is to increase its total return above the benchmark index of 60% FTSE All-Share and 40% FT/S&P World Index (ex UK sterling adjusted) over the long term, by investing in UK and international securities. The strategy of the Trust is designed to meet the requirements of those seeking a single investment in a diversified and professionally managed portfolio.

††The Trust also seeks to enhance returns for its shareholders through gearing, in the form of bank borrowings. Gearing can boost the Trust's returns when investments perform well, though losses can be magnified when investments do badly. You should be aware that this Trust may be subject to sudden and large falls in value and you could suffer substantial capital loss.

Fund Managers' review

After the heavy falls in January, world equity markets were broadly flat in February. Negative economic news flow from the US and fears of further write downs in the Banking sector were offset by record highs in a number of commodity prices. The portfolio performed in-line with its benchmark, with US oil and gas companies Transocean and Devon Energy among the portfolio's best performers after reporting good Q4 figures. UK construction company Carillion also performed strongly after announcing that it had signed a facilities management contract valued at more than £500m with BT. The Financials were the worst performers within the portfolio with HBOS, Citigroup and Prudential Financial all struggling.

Changes in rates of exchange may cause the value of investments and the income from them to go down or up.

Source: Allianz Global Investors/ Mellon. 28th February 2003 to 29th February 2008. Capital only, calculation indexed. UK Sterling.

Past performance is not a reliable indicator of future performance. You should not make any assumptions on the future on the basis of performance information. The value of an investment and the income from it can fall as well as rise as a result of market and currency fluctuations and you may not get back the amount originally invested. This investment trust charges 70% of its annual management fee to the capital account and 30% to revenue. This could lead to a higher level of income but capital growth will be constrained as a result. Your capital could also decrease if income paid out of capital exceeds the growth rate of the trust.

History

The Trust was formed from the Brunner family's interest in the sale of Brunner, Mond & Co, the largest of the four companies which came to form ICI in 1926. The Trust has been managed by Allianz Global Investors (formerly Kleinwort Benson and now part of Allianz) since inception.

Launch Date: 1927 **Wind-up Date:** None
