Investment trusts are quoted companies listed on the London Stock Exchange. Their share price is determined by factors including demand, or lack of, which means that the shares may trade below (at a discount to) or above (at a premium to) the underlying net asset value.

A trust's net asset value (NAV) is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities. In line with current industry best practice NAVs are shown that take into account the 'fair value' of debt. This means NAVs are calculated after allowing for the valuation of debt at fair value or current market price, rather than at final repayment value. NAVs with debt at market value provide a more realistic impact of the cost of debt, and thus a more realistic discount.

Trust aim & characteristics

The Trust's objective is to increase its total return above the benchmark index of 60% FTSE All-Share and 40% FT/S&P World Index (ex UK sterling adjusted) over the long term, by investing in UK and international securities. The strategy of the Trust is designed to meet the requirements of those seeking a single investment in a diversified and professionally managed portfolio.

††The Trust also seeks to enhance returns for its shareholders through gearing, in the form of bank borrowings. Gearing can boost the Trust's returns when investments perform well, though losses can be magnified when investments do badly. You should be aware that this Trust may be subject to sudden and large falls in value and you could suffer substantial capital loss.

Fund Managers' Review

Brunner had a positive month as markets responded to robust earnings announcements. Large cap names performed well relative to the broader market as mid and small cap stocks marked time, whilst M&A activity remains a supportive factor for markets.

During the period, growth, cyclical sectors performed well, with our overweight position in mining stocks such as BHP Billiton and Xstrata benefiting performance. Other overweights including Nintendo (the Japanese games company) and Porsche (the German luxury car manufacturer) outperformed on the back of positive analyst reviews.

Looking ahead equities appear attractive value in absolute terms and relative to other asset classes.

Source: Allianz Global Investors / Mellon. 30th June 2002 to 30th June 2007. Calculation index, capital only. UK Sterling.

Please remember that past performance is not a guide to future performance. The value of an investment and the income from it can fall as well as rise as a result of market or currency fluctuations and you may not get back the amount originally invested. This investment trust charges 70% of its annual management fee to the capital account and 30% to revenue. This could lead to a higher level of income but a lower capital return.

History

The Trust was formed from the Brunner family's interest in the sale of Brunner, Mond & Co, the largest of the four companies which came to form ICI in 1926. The Trust has been managed by Allianz Global Investors (formerly Kleinwort Benson and now part of Allianz) since inception.

Launch Date: 1927 **Wind-up Date:** None

Share buybacks

16,083,958 shares have been repurchased for cancellation to date.
