Investment trusts are quoted companies listed on the London Stock Exchange. Their share price is determined by factors including demand, or lack of, which means that the shares may trade below (at a discount to) or above (at a premium to) the underlying net asset value.

A trust's net asset value (NAV) is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities. In line with current industry best practice NAVs are shown that take into account the 'fair value' of debt. This means NAVs are calculated after allowing for the valuation of debt at fair value or current market price, rather than at final repayment value. NAVs with debt at market value provide a more realistic impact of the cost of debt, and thus a more realistic discount.

### Trust aim & characteristics

The Trust's objective is to increase its total return above the benchmark index of 60% FTSE All-Share and 40% FT/S&P World Index (ex UK sterling adjusted) over the long term, by investing in UK and international securities. The strategy of the Trust is designed to meet the requirements of those seeking a single investment in a diversified and professionally managed portfolio.

††The Trust also seeks to enhance returns for its shareholders through gearing, in the form of bank borrowings. Gearing can boost the Trust's returns when investments perform well, though losses can be magnified when investments do badly. You should be aware that this Trust may be subject to sudden and large falls in value and you could suffer substantial capital loss.

### Fund Managers' Six-Monthly Review

Global equity markets continued to post strong returns in the 6 month period to 30th March 2007, with the composite benchmark returning + 8.0%. After a strong end to 2006, the beginning of 2007 saw increased volatility in the markets. The increase in volatility was fuelled by mixed economic data, a sell off of Chinese securities in February and concerns over the US sub prime mortgage market. However these were offset by supportive corporate earnings and merger and acquisition activity. During this period, Xstrata, BHP Billiton and Informa delivered excellent outperformance, with BHP and Xstrata boosted by high commodity prices and high demand from China and the Emerging Markets. However the trusts holding of ING Group and Schneider Electric underperformed.

## Geographical breakdown

Source: Allianz Global Investors as at 30.03.07. Changes in rates of exchange may cause the value of investments and the income from them to go down or up.

## Fund Performance

Source: Allianz Global Investors/ Russell/ Mellon. 31st March 2002 to 30th March 2007. Total return, net income reinvested, calculation indexed. UK Sterling.

Please remember that past performance is not a guide to future performance. The value of an investment and the income from it can fall as well as rise as a result of market or currency fluctuations and you may not get back the amount originally invested. This investment trust charges 70% of its annual management fee to the capital account and 30% to revenue. This could lead to a higher level of income but a lower capital return.

## Standardised Past Performance
