# The Brunner Investment Trust PLC

31 March 2010

# **Aim**

The Trust's objective is to increase its total return above the benchmark index of 50% FTSE All-Share and 50% FTSE All-World Index (ex UK sterling adjusted) over the long term, by investing in UK and international securities. The strategy of the Trust is designed to meet the requirements of those seeking a single investment in a diversified and professionally managed portfolio.

## **Risks & Features**

Investment trusts are quoted companies listed on the London Stock Exchange. Their share prices are determined by factors including the balance of supply and demand in the market, which means that the shares may trade below (at a discount to) or above (at a premium to) the underlying net asset value.

The Trust seeks to enhance returns for its shareholders through gearing, in the form of long-term, fixed rate debentures. Gearing can boost the Trust's returns when investments perform well, though losses can be magnified when investments lose value. You should be aware that this Trust may be subject to sudden and large falls in value and you could suffer substantial capital loss.

# **History**

The Trust was formed from the Brunner family's interest in the sale of Brunner, Mond & Co, the largest of the four companies which came to form ICI in 1926. The Trust has been managed by RCM (a subsidiary of Allianz Global Investors formerly Kleinwort Benson) since inception.

## **Fund Managers' Review**

Mark Lovett Lucy MacDonald

World Equity markets finished the first quarter of 2010 strongly, with the Brunner benchmark returning over 6.4% for the month of March. The performance of the markets was lead by commodity and consumer sectors, as investors once again sought to increase risk within their portfolios as confidence in a global

recovery strengthened. Economic data generally continued it's more positive trends globally and policy makers across the World are still showing a willingness to keep monetary policy accommodative. Greece continues to be a headache for the Eurozone, although a new austerity plan unveiled by the Greek government and plans for member states and the IMF to shoulder the debt burden at least eased some of the tension.

The Brunner portfolio performed slightly ahead of its benchmark in March. The best performing stock within the portfolio was UK engineering firm Melrose, after the company announced that its 2008 aquisition of UK ropemaker FKI had been more profitable than expected. The company also stated that they were searching for new aquisiiton targets but were willing to be patient. Apple also performed well after the successful launch of the iPad as did International Personal Finance after it obtained its first public credit rating.

# **Key Information**

<sup>2</sup>Source: Datastream as at 31.03.10. Calculated using the latest full year dividend divided by the current share price.

<sup>3</sup>A trust's net asset value (NAV) is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities. In line with current industry best practice NAVs are now shown that take into account the 'fair value' of debt. This means NAVs are calculated after allowing for the valuation of debt at fair value or current market price, rather than at final repayment value. NAVs with debt at market value provide a more realistic impact of the cost of debt, and thus a more realistic discount. It is the capital NAV that is shown, which excludes any income.

Source: Lipper, percentage growth, mid to mid, capital return, to 31.03.10 Benchmark: 50% FTSE All-Share Index/50% FTSE All-World ex UK Index. Note the benchmark was 60% FTSE All-Share and 40% FT/S&P World Index (ex UK sterling adjusted) up to 26th March 2008.

Standardised past performance figures comply with the Financial Services Authority's regulations to enable investors to compare different products from different providers.

Past performance is not a reliable indicator of future performance. You should not make any assumptions on the future on the basis of performance information. The value of an investment and the income from it can fall as well as rise as a result of market fluctuations and you may not get back the amount originally invested.

This investment trust charges 70% of its annual management fee to the capital account and 30% to revenue. This could lead to a higher level of income but capital growth will be constrained as a result. Your capital could also decrease if income paid out of capital exceeds the growth rate of the trust.
