Investment trusts are quoted companies listed on the London Stock Exchange. Their share price is determined by factors including demand, or lack of, which means that the shares may trade below (at a discount to) or above (at a premium to) the underlying net asset value.

A trust's net asset value (NAV) is calculated as available shareholders' funds divided by the number of shares in issue, with shareholders' funds taken to be the net value of all the company's assets after deducting liabilities. In line with current industry best practice NAVs are shown that take into account the 'fair value' of debt. This means NAVs are calculated after allowing for the valuation of debt at fair value or current market price, rather than at final repayment value. NAVs with debt at market value provide a more realistic impact of the cost of debt, and thus a more realistic discount.

Trust aim & characteristics

The Trust's objective is to increase its total return above the benchmark index of 60% FTSE All-Share and 40% FT/S&P World Index (ex UK sterling adjusted) over the long term, by investing in UK and international securities. The strategy of the Trust is designed to meet the requirements of those seeking a single investment in a diversified and professionally managed portfolio.

††The Trust also seeks to enhance returns for its shareholders through gearing, in the form of bank borrowings. Gearing can boost the Trust's returns when investments perform well, though losses can be magnified when investments do badly. You should be aware that this Trust may be subject to sudden and large falls in value and you could suffer substantial capital loss.

Fund Managers' Review

Equity market returns for August were generally flat with high levels of volatility. The credit market uncertainty from July continued into August, but a 0.5% reduction by the US Federal Reserve in the discount rate and some strong Q2 earnings offset this. The portfolio performed in line with its benchmark during the month. The best performers were BAE Systems after reporting good first half results, and China Mobile which rose on expectation that the Chinese government would allow mainland residents to buy Hong Kong denominated shares. Informa and easyjet also performed well. Man Group, Ralph Lauren and Stree were the portfolio's worst performers.

Source: Allianz Global Investors/ Mellon. 31st August 2002 to 31st August 2007. Capital only, calculation indexed. UK Sterling.

Please remember that past performance is not a guide to future performance. The value of an investment and the income from it can fall as well as rise as a result of market or currency fluctuations and you may not get back the amount originally invested. This investment trust charges 70% of its annual management fee to the capital account and 30% to revenue. This could lead to a higher level of income but a lower capital return.
